

THE 'HIDDEN EIGHT' GAME

In ancient times, kings throughout their reign continued the work of their predecessor in charting the course of history, sometimes illicitly.

Great events, as well as the most relevant acts, can be discovered from the truth thanks to a hidden communication game. The results of this game's data were unveiled from kings to princes, thus leaving an imprint with the aim of documenting their own chapter in history.

The game's cabala acts in parallel with historical intelligence with the veracity of the facts, revealing a hidden encrypted message, previously encoded using a simple alphanumeric cipher.

What is the technique?

The cabala technique, applied to the 'Hidden Eight' game, consists of using two words within the same historical context to find a third word hidden from view that solves the enigma.

The dynamics:

- Two words related to the same context are selected.
- Letters that match in both words are removed. With the rest, one plays Scrabble-style.
- The result of combining these letters generates a third word that reveals the hidden message.
- All letters from both words must be used exactly once, and it is mandatory to integrate those that match the third word of the hidden message.

Mathematical Dynamics

The mathematical logic of the game, through the alphanumeric code, consists of adding or subtracting the letters of both words that have not been eliminated or integrated into the third word. Its goal is to

find another letter that fits with the missing ones to complete the hidden word.

Examples:

Example 1: $A1 + B2 = C3$; Example 2: $C3 - B2 = A1$

Alphanumeric Code

A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T	U	V	W	X	Y	Z
1	2	3	4	5	6	0	7	8	0	0	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23
